

Kyorene® Graphene Fibers Are Bringing New Innovations to Major Brands

In the last few years, we have seen graphene-based products commercialized in a wide range of applications ranging from waxes to batteries to plastics, and even concrete.

In textiles and clothing, graphene now has a firm footing as a truly innovative new material. Leading this effort is Kyorene® graphene fibers from QS Safety with polyester, nylon, and bamboo-based vis-cose fibers in staple and filament forms.

The graphene in Kyorene® fibers provides three major functional improvements; bacteriostatic, odor neutralization, and thermal regulation. These properties are permanent since the graphene is not a coating but rather part of the fiber itself. Kyorene® fibers are commercial in applications including underwear, sportswear, socks, denim, jackets, golf and t-shirts and home textiles.
